

Denki no Ishizue

Exposition by Edson Hirokazu Watanabe

- **Main exposition**

This was done by a talk presented at the auditorium of COPPE¹ - Federal University of Rio de Janeiro, on November 07, 2022.

It was a total of one hour presentation / discussion at the auditorium. There were about 40 students and professors present, including the Director of Academic Affairs of Coppe and the President of the Association of Professors at the University. Some people attended the presentation remotely (by video), but we do not have the numbers.

After the presentation, our Press Office prepared a note which was published in Portuguese at:

<https://www.coppe.ufrj.br/pt-br/planeta-coppe-noticias/noticias/professor-watanabe-apresenta-premio-recebido-pela-difusao-de-teoria>

This note was also advertised sometimes to all students and professors at COPPE and some other schools of the University.

These two pictures were taken at the end of this event.

¹ COPPE is the acronym for the Graduate School of Engineering at the University. It has about 350 professors and assistant professors as well as 2,400 master and doctor level students divided in 14 Departments.

- **The exposition at the Japanese Consulate in Rio de Janeiro**

As my career was strongly influenced by the fellowship I got from the Japanese Government through the Japanese Consulate in Rio de Janeiro, I took the trophy to show then and also show to some former students.

Myself with some former Mobukagakusho fellows.

Myself with the trophy at the Japanese Consulate.

The Cultural Council at Rio de Janeiro Mr. Takaaki Usui and myself.

- **The Exposition In my Laboratory at the University**

I also exposed the trophy at the Laboratory of Power Electronics for the students to see it.

Two students watching the trophy.
